Advanced Machine Learning with Python

John Hearty

Advanced Machine Learning with Python John Hearty

Solve challenging data science problems by mastering cutting-edge machine learning techniques in Python

About This Book

- Resolve complex machine learning problems and explore deep learning
- Learn to use Python code for implementing a range of machine learning algorithms and techniques
- A practical tutorial that tackles real-world computing problems through a rigorous and effective approach

Who This Book Is For

This title is for Python developers and analysts or data scientists who are looking to add to their existing skills by accessing some of the most powerful recent trends in data science. If you've ever considered building your own image or text-tagging solution, or of entering a Kaggle contest for instance, this book is for you!

Prior experience of Python and grounding in some of the core concepts of machine learning would be helpful.

What You Will Learn

- Compete with top data scientists by gaining a practical and theoretical understanding of cutting-edge deep learning algorithms
- Apply your new found skills to solve real problems, through clearly-explained code for every technique and test
- Automate large sets of complex data and overcome time-consuming practical challenges
- Improve the accuracy of models and your existing input data using powerful feature engineering techniques
- Use multiple learning techniques together to improve the consistency of results
- Understand the hidden structure of datasets using a range of unsupervised techniques
- Gain insight into how the experts solve challenging data problems with an effective, iterative, and validation-focused approach
- Improve the effectiveness of your deep learning models further by using powerful ensembling techniques to strap multiple models together

In Detail

Designed to take you on a guided tour of the most relevant and powerful machine learning techniques in use today by top data scientists, this book is just what you need to push your Python algorithms to maximum potential. Clear examples and detailed code samples demonstrate deep learning techniques, semi-supervised learning, and more - all whilst working with real-world applications that include image, music, text, and financial data.

The machine learning techniques covered in this book are at the forefront of commercial practice. They are applicable now for the first time in contexts such as image recognition, NLP and web search, computational creativity, and commercial/financial data modeling. Deep Learning algorithms and ensembles of models are in use by data scientists at top tech and digital companies, but the skills needed to apply them successfully, while in high demand, are still scarce.

This book is designed to take the reader on a guided tour of the most relevant and powerful machine learning techniques. Clear descriptions of how techniques work and detailed code examples demonstrate deep learning techniques, semi-supervised learning and more, in real world applications. We will also learn about NumPy and Theano.

By this end of this book, you will learn a set of advanced Machine Learning techniques and acquire a broad set of powerful skills in the area of feature selection & feature engineering.

Style and approach

This book focuses on clarifying the theory and code behind complex algorithms to make them practical, useable, and well-understood. Each topic is described with real-world applications, providing both broad contextual coverage and detailed guidance.

From reader reviews:

Daniel Reynolds:

As people who live in often the modest era should be upgrade about what going on or details even knowledge to make these individuals keep up with the era which is always change and move ahead. Some of you maybe may update themselves by looking at books. It is a good choice for yourself but the problems coming to you is you don't know which you should start with. This Advanced Machine Learning with Python is our recommendation to cause you to keep up with the world. Why, as this book serves what you want and want in this era.

Brian Mejia:

Often the book Advanced Machine Learning with Python will bring one to the new experience of reading a new book. The author style to spell out the idea is very unique. Should you try to find new book to study, this book very acceptable to you. The book Advanced Machine Learning with Python is much recommended to you to read. You can also get the e-book from the official web site, so you can more easily to read the book.

Sharon Hafer:

Spent a free a chance to be fun activity to try and do! A lot of people spent their leisure time with their family, or their friends. Usually they accomplishing activity like watching television, gonna beach, or picnic in the park. They actually doing same task every week. Do you feel it? Would you like to something different to fill your free time/ holiday? Can be reading a book could be option to fill your cost-free time/ holiday. The first thing that you will ask may be what kinds of reserve that you should read. If you want to try out look for book, may be the publication untitled Advanced Machine Learning with Python can be excellent book to read. May be it could be best activity to you.

Carl Johnson:

That reserve can make you to feel relax. That book Advanced Machine Learning with Python was vibrant and of course has pictures on the website. As we know that book Advanced Machine Learning with Python has many kinds or style. Start from kids until youngsters. For example Naruto or Private investigator Conan you can read and think that you are the character on there. So , not at all of book are make you bored, any it offers up you feel happy, fun and rest. Try to choose the best book in your case and try to like reading that.
