Advances in Imaging and Electron Physics: 133 Peter W. Hawkes

- * A special volume devoted principally to the role of the late Sir Charles Oatley in the development of the scanning electron microscopeings
- * It contains historical articles and reminiscences by most of the scientists who have worked on the scanning electron microscope in Oatley's laboratory
- * Emphasizes broad and in depth article collaborations between world-renowned scientists in the field of image and electron physics

Although the scanning electron microscope had a prehistory in Germany and the USA, its real champion was Charles Oatley, who launched his project in the Cambridge University Engineering Department shortly after the end of World War II. A first microscope was built successfully by D. McMullan, one of the Guest Editors of this volume and a succession of progressively improved instruments followed. One in particular, built by K.C.A. Smith was commissioned specially for the Canadian Pulp and Paper Research Institute for use in their Montreal laboratories. All these efforts culminated in the commercial model built by the Cambridge Instrument Company and marketed in 1965 under the trade name, Stereoscan. Although this story has been told on several occasions, in particular in these Advances, it seemed appropriate, in the centenary year of the birth of Sir Charles Oatley, that more details should be published to celebrate these achievements. This volume is the result.

It contains not only historical articles and reminiscences by most of the scientists who have worked on the scanning electron microscope in Oatley's laboratory but also full or partial reproductions of many of the key publications, beginning with McMullan's early paper of 1953 and including Oatley's own "Early history of the scanning electron microscope" (1982). A website has been created, in which supplementary material is collected.

This volume is a tribute to a bold pioneering scientist and a vivid record of the creation of the first commercial scanning electron microscopes and of subsequent developments.

From reader reviews:

Janelle Smith:

Book is actually written, printed, or illustrated for everything. You can recognize everything you want by a book. Book has a different type. To be sure that book is important thing to bring us around the world. Adjacent to that you can your reading skill was fluently. A guide Advances in Imaging and Electron Physics: 133 will make you to possibly be smarter. You can feel much more confidence if you can know about every little thing. But some of you think which open or reading a new book make you bored. It is not make you fun. Why they could be thought like that? Have you searching for best book or suited book with you?

George Kirby:

Information is provisions for those to get better life, information currently can get by anyone on everywhere. The information can be a information or any news even restricted. What people must be consider whenever those information which is in the former life are challenging to be find than now is taking seriously which one would work to believe or which one often the resource are convinced. If you have the unstable resource then you buy it as your main information it will have huge disadvantage for you. All of those possibilities will not happen within you if you take Advances in Imaging and Electron Physics: 133 as your daily resource information.

Flora Gordon:

Spent a free time to be fun activity to do! A lot of people spent their free time with their family, or their very own friends. Usually they performing activity like watching television, about to beach, or picnic inside park. They actually doing same thing every week. Do you feel it? Will you something different to fill your current free time/ holiday? Can be reading a book might be option to fill your free of charge time/ holiday. The first thing that you ask may be what kinds of e-book that you should read. If you want to attempt look for book, may be the reserve untitled Advances in Imaging and Electron Physics: 133 can be fine book to read. May be it is usually best activity to you.

Irma Murray:

Can you one of the book lovers? If yes, do you ever feeling doubt if you find yourself in the book store? Aim to pick one book that you just dont know the inside because don't determine book by its deal with may doesn't work this is difficult job because you are afraid that the inside maybe not seeing that fantastic as in the outside look likes. Maybe you answer might be Advances in Imaging and Electron Physics: 133 why because the amazing cover that make you consider in regards to the content will not disappoint an individual. The inside or content is definitely fantastic as the outside or perhaps cover. Your reading 6th sense will directly direct you to pick up this book.
