Compositional Verification of Concurrent and Real-Time Systems (The Springer International Series in Engineering and Computer Science)

Eric Y.T. Juan, Jeffrey J.P. Tsai

Compositional Verification of Concurrent and Real-Time Systems (The Springer International Series in Engineering and Computer Science) Eric Y.T. Juan, Jeffrey J.P. Tsai

With the rapid growth of networking and high-computing power, the demand for large-scale and complex software systems has increased dramatically. Many of the software systems support or supplant human control of safety-critical systems such as flight control systems, space shuttle control systems, aircraft avionics control systems, robotics, patient monitoring systems, nuclear power plant control systems, and so on. Failure of safety-critical systems could result in great disasters and loss of human life. Therefore, software used for safety critical systems should preserve high assurance properties. In order to comply with high assurance properties, a safety-critical system often shares resources between multiple concurrently active computing agents and must meet rigid real-time constraints. However, concurrency and timing constraints make the development of a safety-critical system much more error prone and arduous. The correctness of software systems nowadays depends mainly on the work of testing and debugging. Testing and debugging involve the process of detecting, locating, analyzing, isolating, and correcting suspected faults using the runtime information of a system. However, testing and debugging are not sufficient to prove the correctness of a safety-critical system. In contrast, static analysis is supported by formalisms to specify the system precisely. Formal verification methods are then applied to prove the logical correctness of the system with respect to the specification. Formal verification gives us greater confidence that safety-critical systems meet the desired assurance properties in order to avoid disastrous consequences.

From reader reviews:

Nancy Baumgardner:

Nowadays reading books become more than want or need but also work as a life style. This reading routine give you lot of advantages. The benefits you got of course the knowledge the rest of the information inside the book in which improve your knowledge and information. The details you get based on what kind of guide you read, if you want have more knowledge just go with training books but if you want really feel happy read one along with theme for entertaining for example comic or novel. Typically the Compositional Verification of Concurrent and Real-Time Systems (The Springer International Series in Engineering and Computer Science) is kind of e-book which is giving the reader capricious experience.

Mary Salas:

A lot of people always spent all their free time to vacation as well as go to the outside with them family or their friend. Did you know? Many a lot of people spent many people free time just watching TV, or even playing video games all day long. If you need to try to find a new activity here is look different you can read a book. It is really fun to suit your needs. If you enjoy the book that you read you can spent all day long to reading a guide. The book Compositional Verification of Concurrent and Real-Time Systems (The Springer International Series in Engineering and Computer Science) it is rather good to read. There are a lot of people who recommended this book. These were enjoying reading this book. In the event you did not have enough space to deliver this book you can buy typically the e-book. You can m0ore simply to read this book from your smart phone. The price is not very costly but this book provides high quality.

Enola Hudson:

Book is one of source of information. We can add our understanding from it. Not only for students but native or citizen need book to know the update information of year to help year. As we know those ebooks have many advantages. Beside most of us add our knowledge, also can bring us to around the world. From the book Compositional Verification of Concurrent and Real-Time Systems (The Springer International Series in Engineering and Computer Science) we can have more advantage. Don't you to definitely be creative people? To be creative person must choose to read a book. Just simply choose the best book that ideal with your aim. Don't always be doubt to change your life with that book Compositional Verification of Concurrent and Real-Time Systems (The Springer International Series in Engineering and Computer Science). You can more attractive than now.

Gary Lund:

A lot of people said that they feel bored when they reading a publication. They are directly felt the idea when they get a half elements of the book. You can choose the particular book Compositional Verification of Concurrent and Real-Time Systems (The Springer International Series in Engineering and Computer

Science) to make your personal reading is interesting. Your own skill of reading expertise is developing when you similar to reading. Try to choose very simple book to make you enjoy to learn it and mingle the opinion about book and studying especially. It is to be 1st opinion for you to like to wide open a book and learn it. Beside that the book *Compositional Verification of Concurrent and Real-Time Systems* (The Springer International Series in Engineering and Computer Science) can to be your brand-new friend when you're sense alone and confuse in doing what must you're doing of these time.
