Molecular Spectra and Molecular Structure: Electronic Spectra and Electronic Structure of Polyatomic Molecules Gerhard Herzberg

In contrast to diatomic molecules, the spectroscopic study of polyatomic molecules was for a long time carried out principally by work in the infrared region and by the study of the Raman effect. However, the considerable improvement in vacuum ultraviolet techniques and the development for the study of free radicals have made possible a rapid development of the study of electronic spectra. The object of this book is to present the results of this new development without neglecting the significant older work on the subject.
