Information Communication Technology And Economic Development: Learning from the Indian Experience

India has become a highly visible participant in the information communication technology (ICT) industry. Since the 1990s, it has been one of the fastest growing economies in the world, emerging as the most watched test of global capitalism. The contributors to this volume examine how the ICT-driven development of India appears to have skipped the middle stages of the traditional economic development models and leapfrogged directly to the final stage whereby growth is mostly technologically driven. Information Communication Technology and Economic Development reveals new insights regarding the complex process of globalization. It shows how the generation and circulation of intellectual capital in the US and India in ICT have led to greater productivity in the US while facilitating the economic development of India. Most industrialized nations now see the vast intellectual capital-based services that India provides at extremely competitive rates as key to their own national competitiveness in the global arena. The contributors' findings suggest that India's ICT-led growth will accelerate in the next ten years, launching India as a major global economic power next to the US and China. This provocative and timely volume will be a necessary read for students and scholars of international business, public policy, economic development, management and strategy as well as all those interested in the impact of globalization on national and regional economies.
